

HONEYWELL ENACTO

Cloud-based end-to-end energy management solutions for the retail sector

Honeywell

FACILITY OPTIMIZATION

HONEYWELL CONNECTED RETAIL SOLUTIONS

Cloud-based end-to-end energy management solutions to optimise cost savings and increase operational efficiency across a large portfolio of connected facilities whilst maintaining an exceptional level of in-store shopper experience.

IF YOU ARE A RETAIL ENERGY MANAGER RESPONSIBLE FOR A PORTFOLIO OF STORES, THESE MAY SOUND FAMILIAR TO YOU:

- I need clear visibility of my energy consumption to drive savings and efficiency initiatives that are going to positively impact margins and deliver shopper value
- Making investment decisions is difficult because I cannot compare energy improvement projects across multiple assets or locations
- I do not have clear performance degradation visibility of critical store assets to minimise expensive one-off maintenance costs and unplanned store disruptions
- It is difficult to get data on energy optimisation initiatives for reporting back to my company or industry regulators

Solving these challenges is critical for your company to remain competitive and top-of-mind with shoppers.

Honeywell Enacto Energy Management Solutions are providing many large global retailers with the granular visibility and insights into their energy usage in order to identify optimisation opportunities.

Our metering hardware and cloud-based software solutions connect the energy and water usage of all your assets and facilities in a single data, analytics and reporting platform to drive actionable insights and maximum ROI.

HONEYWELL ENACTO DELIVERS VALUE AGAINST YOUR KEY NEEDS.
